

Assignment –7

Summarizing Data with Aggregate Functions.

- 1) Write a query that counts all orders for October 3.

Query-

```
select Odate, sum(Onum) from orders
where Odate='1990-10-03'
group by odate;
```

- 2) Write a query that counts the number of different non-NULL city values in the Customers table.

Query-

```
select count(distinct city) as "Differentcity"
from customers;
```

- 3) Write a query that selects each customer's smallest order.

Query-

```
select Cname, min(cnum) as "smallest order" from customers
group by cname;
```

- 4) Write a query that selects the first customer, in alphabetical order, whose name begins with G.

Query-

```
select cname from customers
where cname like 'G%';
```

- 5) Write a query that selects the highest rating in each city.

Query-

```
select*from customers
order by rating desc;
```

- 6) Write a query that counts the number of salespeople registering orders for each day. (If a salesperson has more than one order on a given day, he or she should be counted only once.).

Query-

```
select sname,count(distinct Snum) as "registerPeople" From salespeople group by sname;
```
