

Assignment – 9

Querying Multiple Tables at Once.

- 1) Write a query that lists each order number followed by the name of the customer who made the order.

Query-

```
select*from orders;
SELECT Orders.Onum, Customers.CName
FROM Orders
INNER JOIN Customers ON Orders.Cnum = Customers.Cnum;
select*from customers;
```

- 2) Write a query that gives the names of both the salesperson and the customer for each order along with the order number.

Query- SELECT

```
Orders.onum AS "Order Number",
customers.Cname AS "Customer Name",
salespeople.sname AS "Salesperson Name"
FROM
Orders o
JOIN
Customer Cname ON orders.Cnum = customers.cnum
JOIN
Salesman sname ON O.snum = salespeople.snum;
```

- 3) Write a query that produces all customers serviced by salespeople with a commission above 12%. Output the customer's name, the salesperson's name, and the salesperson's rate of commission.

Query-

```
SELECT
customers.cname AS "Customer Name",
salespeople.sname AS "Salesperson Name",
salespeople.comm AS "Commission Rate"
FROM
Customers customers
INNER JOIN
salespeople salespeople on customers.snum = salespeople.salespeople
WHERE
salespeople.comm > 0.12;
```
